Prompt Engine — Claude Design Prompt Pack

Nov 10, 2026 · @Syed Razi

How to use this pack

Run Prompt 0 first to create the Prompt Engine design system, then run the screen prompts in order, one per Claude Design session, with that design system selected.

1. **Create the design system.** Paste Prompt 0. Review colors, type and components, then set it as your default design system.
2. **Attach context.** In each screen session, attach the *Project Context* PDF so Claude Design knows the roles, data fields and rules.
3. **One screen group per prompt.** Each prompt below asks for desktop (1440 px) plus mobile (390 px) artboards, since web and mobile share one product.
4. **Iterate, don't restart.** Use the follow-up prompts at the end to refine a design in the same session.
5. **Build order matches the roadmap.** Phase 2 web screens first (marketplace, creator, core, admin), then Phase 3 integrations, then marketing visuals.

Tip: keep the shared context block below at the top of every screen prompt if you don't attach the PDF.

```
CONTEXT: Prompt Engine is a web + mobile app where people write, test,
version and reuse AI prompts, plus a marketplace where creators sell image
and video prompts (often promoted on Instagram). Buyers preview sample
outputs, buy, and click "Generate" to run the prompt in a connected AI tool,
then post the result to social media. Roles: Buyer, Creator (seller), Prompt
engineer, Team member (owner/editor/viewer), Admin/moderator. Use the Prompt
Engine design system. Use realistic sample data, never lorem ipsum. Prices in
USD with PKR shown as secondary where relevant.
```

Prompt 0 — Design system

This sets the look every later screen inherits; run it once and make it your default.

```
Create a design system for "Prompt Engine", a creative-tech product: a prompt workspace for developers and a marketplace where Instagram creators sell AI image and video prompts.

Personality: confident, creative, trustworthy, fast. Premium but not cold. It must feel at home next to Instagram and modern AI tools, while the editor side feels as precise as a code IDE.

Include:
- Brand: wordmark for "Prompt Engine" and a compact app icon based on a spark or bracket motif.
- Color: a dark-first theme (near-black canvas, layered surfaces) and a matching light theme. One vivid primary accent (electric violet), one secondary (cyan), plus success, warning, danger and info. A subtle gradient for marketplace hero areas and creator highlights.
- Typography: a geometric sans for UI and headings, a monospace for prompt text and variables. Full type scale from caption to display.
- Spacing, radius (soft 8–16 px), elevation and border tokens.
- Components with all states (default, hover, focus, disabled, loading, error): buttons, inputs, search bar, tags/chips, variable token chip ({{customer_name}} style), tabs, dropdowns, toggles, modals, drawers, toasts, tooltips, avatars, badges (Verified creator, Bestseller, New), star rating, price tag, progress and status pills (Queued, Running, Done, Failed), empty states, skeleton loaders.
- Product-specific components: prompt listing card (sample image, title, creator, price, rating, target-tool icons), creator card, blurred/locked prompt preview, model output card (latency, tokens, cost), version diff line, generation job card, social account chip, stat card with sparkline.
- Icon style guide (outline, 1.5 px stroke) and image treatment for sample outputs (rounded, with optional watermark).
- Accessibility: WCAG AA contrast in both themes, visible focus rings, 44 px minimum touch targets.

Show each component on desktop and mobile where it differs.
```

Marketplace — buyer screens

Five prompts cover the full buyer journey from discovery to generating with a bought prompt.

1. Marketplace home

```
Design the Prompt Engine marketplace home page (desktop 1440 + mobile 390), using the Prompt Engine design system.

Sections: top nav (logo, search, Explore, Library, Playground, Sell, wallet credits, avatar); hero with search bar and quick filters (Image, Video, Text, Midjourney-style, Cinematic, Product shots, Anime-style, Portraits); "Trending this week" grid of prompt listing cards; "New from creators you follow"; featured collections as large banners; top creators row with avatars, follower count and Verified badge; categories grid; footer.

Listing card: sample output image or looping video thumbnail, title, creator handle, price (USD), star rating with count, target AI tool icons, Bestseller/New badge, save heart.

Feel: visual-first like Instagram explore, dense but airy. Mobile: bottom tab bar (Home, Explore, Generate, Library, Profile).
```

2. Search and browse results

```
Design the marketplace search results page for the query "cinematic portrait" (desktop + mobile).

Left filter panel (bottom sheet on mobile): category (image/video/text), target AI tool, style, price range, rating, licence type (personal, commercial, extended), bundles only, verified creators only. Top bar: result count, sort (Trending, Newest, Top rated, Price low-high), grid/list toggle, active filter chips. Masonry grid of listing cards with infinite scroll. Include an empty state ("No prompts match these filters") and a loading skeleton state.
```

3. Listing detail

```
Design a prompt listing detail page for "Golden Hour Street Portrait – 12 variations" by @lensbyayesha (desktop + mobile).

Include: sample output gallery (carousel of 6 images + 1 video, each labelled with the AI tool used); title, creator chip with Verified badge and Follow button; price $6.99 with PKR equivalent; licence selector (Personal / Commercial / Extended) that changes price; Buy now and Add to cart; "Included in bundle" upsell.

Locked prompt preview: show the prompt structure (Subject, Style, Camera, Lighting, Aspect ratio, Negative prompt) with values blurred and a lock icon: "Unlocks after purchase". Never show the real prompt text.

Also: works-with tool icons, what you get list, ratings summary with bar breakdown and verified-buyer reviews, Report listing link, "More from this creator" and "Similar prompts" rows. Mobile: sticky bottom Buy bar.
```

4. Cart and checkout

```
Design cart and checkout for Prompt Engine (desktop + mobile), 3 states: cart, checkout, success.

Cart: line items (thumbnail, title, licence, price), bundle savings callout, promo code, subtotal, total in USD with PKR shown.
Checkout: order summary plus payment method choice that hands off to a hosted gateway (cards, local wallets such as JazzCash/Easypaisa, international card). We never store card details, so show the redirect step clearly with a trust note.
Success: confetti-light confirmation, "Your prompts are in your Library", buttons "Open in Library" and "Generate now", receipt link.
Also design a failed-payment state with retry.
```

5. Purchased prompt in Library

```
Design the buyer's view of a purchased prompt (desktop + mobile).

Shows the now-unlocked prompt with structured media fields (subject, style, camera, lighting, aspect ratio, duration, negative prompt, seed) and editable variables highlighted as chips. Tool-specific variant tabs (one tuned version per AI tool). Primary action "Generate" with a tool picker (connected tools show a green dot; tools without an API show "Copy for tool"). Output gallery of the buyer's past generations from this prompt. Licence badge, receipt link, "Leave a review" prompt, and a subtle note that the copy is watermarked to the buyer.
```

Creator — seller screens

Five prompts cover a creator going from sign-up to getting paid.

6. Creator storefront (public shop page)

```
Design a public creator storefront for @lensbyayesha on Prompt Engine (desktop + mobile; mobile matters most since traffic comes from an Instagram bio link).

Include: cover banner, avatar, Verified badge, bio, social links (Instagram, TikTok, YouTube), follower count, Follow and Subscribe buttons, short shop link (promptengine.app/@lensbyayesha) with copy button. Tabs: Prompts, Bundles, Subscription, Reviews. Featured bundle banner, grid of listing cards, subscription tier card ("$9/month: 10 new prompts monthly"). Make it feel like a personal brand page, not a generic shop.
```

7. Creator onboarding

```
Design a 4-step creator onboarding flow (desktop + mobile): 1) Shop handle, display name, avatar, bio; 2) Connect Instagram/TikTok to verify and show follower count; 3) Payout details (bank account or local wallet, currency PKR/USD) with a note on payout minimum and schedule; 4) Seller agreement and content rules (no adult content, real-person deepfakes, copyrighted characters or brand misuse) with checkbox. Then a "Pending approval" state. Show a step progress indicator and a friendly, encouraging tone.
```

8. Create / edit listing

```
Design the "New listing" editor for creators (desktop + mobile).

Left: form. Pick an existing prompt version from the creator's library or write a new one; structured media fields (subject, style, camera, lighting, aspect ratio, duration, negative prompt, seed); tool-specific variants as tabs. Title, category (image/video/text), target AI tools multi-select, tags, price, licence types with price per licence, include in bundle.
Sample outputs uploader: drag-and-drop images and videos, label each with the tool used, reorder, set cover, optional watermark toggle.
Right: live preview of the listing card and the buyer-facing page, with the prompt text shown locked.
Footer: Save draft, Submit for review. Show validation errors and a "Duplicate prompt detected" warning state.
```

9. Creator dashboard

```
Design the creator dashboard (desktop + mobile).

Top: KPI stat cards for last 30 days — views, conversion rate, sales, earnings (USD and PKR), followers — each with sparkline and change vs previous period. Earnings line chart over time. Traffic sources breakdown (Instagram, TikTok, direct, search) since creators sell via reels. Top listings table (thumbnail, views, sales, conversion, revenue, rating). Recent orders feed, recent reviews needing reply, listing status pills (Draft, In review, Live, Rejected with reason). Quick actions: New listing, Create promo kit, Share shop link.
```

10. Earnings and payouts

```
Design the creator earnings and payouts page (desktop + mobile).

Balance cards: available, pending (in refund window), lifetime. Request payout button with minimum threshold and next scheduled payout date. Ledger table: date, type (sale, commission, refund, payout), listing, amount, running balance, status — traceable line by line. Payout history with status pills. Payout method card with edit. Include the payout request modal and a "below minimum" disabled state.
```

Prompt engine core screens

Six prompts cover the workspace side used by prompt engineers and teams.

11. Prompt library

```
Design the Prompt Library (desktop + mobile).

Left sidebar: workspace switcher, folders tree, tags, filters (Mine,
Purchased, Shared with me, Published), New prompt button. Main: search, sort,
grid/list toggle; prompt rows showing title, type icon (text/image/video),
tags, last edited, version number, test-set score, owner avatar, Purchased
badge where relevant. Bulk actions bar on multi-select. Empty state for a new
user with "Start from a template" cards.
```

12. Prompt editor

```
Design the Prompt Editor, an IDE-like screen (desktop primary, simplified
mobile).

Top bar: breadcrumb (folder / prompt), version dropdown (v12), Save, Publish
to API, Share, More. Main editor: system message and user message panels in
monospace with {{variables}} highlighted as chips; for image/video prompts, a
structured fields panel (subject, style, camera, lighting, aspect ratio,
duration, negative prompt, seed). Tool-variant tabs above the editor.
Right panel tabs: Variables (fill test values), Model settings (model,
temperature, max tokens), Comments (threaded, @mentions), Details. Bottom:
"Run" button with keyboard shortcut and a collapsible output panel. Show an
unsaved-changes indicator.
```

13. Multi-model playground

```
Design the Playground for running one prompt across several models side by
side (desktop + mobile stacked).

Top: prompt picker and variable inputs. Columns (2–4) each with model
selector (e.g. GPT, Claude, Gemini, or an image tool), output (text or
generated image/video), and metrics: latency, tokens in/out, cost in USD.
Per-column actions: rate thumbs up/down, copy, save output to gallery, "Use
this model". Show running, done and error states. A summary row highlighting
fastest and cheapest.
```

14. Version history and diff

```
Design version history for a prompt (desktop + mobile).

Left: timeline of versions (v1–v12) with author avatar, time, commit-style note, test score badge, and a "Published" marker on the live version. Main: side-by-side diff of two selected versions with added/removed lines highlighted (green/red), including changes to structured media fields and model settings. Actions: Restore this version (confirmation modal), Compare with current, Run test set on this version.
```

15. Test sets

```
Design the Test Sets screen (desktop + mobile).

Test set table: input variables, expected output, last result, score, pass/fail pill. Add-case row and CSV import. "Run test set" button with progress bar while running as a background job. Results view: overall score, score trend chart across versions, per-case comparison of expected vs actual with notes. Highlight regressions vs the previous version.
```

16. Team workspace and Prompt API

```
Design two screens (desktop + mobile).

1) Workspace settings: members list with role dropdown (Owner, Editor, Viewer), invite by email modal, pending invites, plan and usage summary.
2) Prompt API page for a published prompt: endpoint POST /api/v1/run/{promptId}, workspace API keys (masked, create/revoke, last used), copyable code samples in tabs (cURL, JavaScript, Python), request/response example, rate limit info, recent calls log with status codes.
```

AI generation and social integrations

Four prompts cover Phase 3: generating with AI tools and publishing to social media.

17. Generate flow and job status

```
Design the "Generate" flow (desktop + mobile), opened from a prompt or purchased listing.

Step 1: pick tool (connected tools first; each shows mode: Platform credits or Own API key; tools without an API show "Copy for tool" which formats and copies the prompt). Step 2: adjust variables and parameters (aspect ratio, duration, seed, count) with credit cost estimate. Step 3: job card while running as a background job: Queued → Running (progress) → Done or Failed with retry; user can leave and get a notification. Result: output viewer for images (grid) and video (player), actions Save to gallery, Download, Regenerate, Post to social.
```

18. Output gallery

```
Design the Output Gallery (desktop + mobile): masonry grid of generated images and videos, each linked to the prompt version, tool and parameters that made it. Filters by prompt, tool, date, type. Detail drawer: large preview, prompt version link, parameters, cost, "Generate similar", "Post to social", "Use as listing sample" (for creators).
```

19. Connections (AI tools and social accounts)

```
Design the Connections settings page (desktop + mobile).

AI tools section: cards per provider with logo placeholder, status (Connected, Not connected, Key invalid), mode toggle (Platform credits / Bring your own key), masked key field with "Keys are encrypted and never shown again" note, Test connection button.
Social accounts section: Instagram, Facebook, TikTok, YouTube, Pinterest, X — Connect via official sign-in, connected account chip with handle and avatar, permissions listed, token expiry warning with Reconnect. Show a "Not available yet" state for platforms coming later.
```

20. Social composer and scheduler

```
Design the social post composer and content calendar (desktop + mobile).

Composer: choose media from gallery, select accounts, platform-specific previews (Instagram feed, Instagram story, TikTok) with format warnings (e.g. wrong aspect ratio), caption with hashtag suggestions, optional buy link to a listing, Post now or Schedule with date/time picker (Asia/Karachi timezone shown).
Calendar: month/week view of scheduled and published posts with status pills (Scheduled, Posted, Failed), click-through stats (clicks and sales from each link).
```

Platform: auth, wallet, notifications, admin

Five prompts cover shared account screens and the internal admin panel.

21. Sign up, log in and role onboarding

```
Design authentication and first-run onboarding (desktop + mobile).

Sign up / log in with email + password and social sign-in (Google, Apple, Facebook). Forgot password and email verification screens. Then a short onboarding: "What brings you here?" with multi-select (Buy prompts, Sell prompts, Build with prompts / API, Work with my team), pick favourite styles and AI tools, then land on a personalised home. Split-screen desktop layout with a collage of sample AI outputs on one side.
```

22. Wallet and credits

```
Design the Wallet page (desktop + mobile): credit balance card, Top up button with credit packs (e.g. 100 / 500 / 2,000 credits with bonus %), spend breakdown by tool, transaction history (top-ups, generations, refunds) with filters, low-balance warning state, and an explanation of credits vs bring-your-own-key.
```

23. Notifications and account settings

```
Design the notifications centre (dropdown on desktop, full screen on mobile) with grouped items: sale made, payout sent, generation done/failed, new review, listing approved/rejected, post published, team mention. Then account settings: profile, security (password, 2FA, active sessions), notification preferences per channel (in-app, email, push), language, theme (dark/light), delete account.
```

24. Admin panel — overview and moderation

```
Design the internal admin panel for Prompt Engine staff (desktop only, dense data UI).

Sidebar: Overview, Users, Creators, Listings, Orders, Payouts, Reports, Fees & settings, Audit log.
Overview: KPIs (GMV, commission earned, new creators, listings pending review, open reports, payouts pending) with charts.
Moderation queue: list of pending listings with sample outputs, flags (possible adult content, real-person deepfake, copyrighted character, brand misuse, duplicate prompt with % match), and a review panel showing full prompt text, creator history, Approve / Reject with reason / Request changes. Keyboard-friendly for fast review.
```

25. Admin panel — orders, payouts, reports

```
Design three admin screens (desktop): 1) Orders table with filters, order detail (items, amounts, commission, gateway reference, payment status) and Refund action with confirmation. 2) Payouts queue: creator, amount, method, balance check against ledger, Approve/Hold in bulk. 3) Reports: reported listings and users with reason, reporter, evidence, status workflow (Open, Investigating, Resolved), and actions (remove listing, suspend creator, dismiss). Every action writes to the audit log; show the audit log screen too.
```

Marketing and promo visuals

Three prompts cover the public landing page, the creator promo kit, and launch posts.

26. Marketing landing page

```
Design the public landing page for Prompt Engine Web (desktop + mobile).

Hero: headline about turning prompts into products (e.g. "Write, test and sell AI prompts — all in one place"), subhead, two CTAs (Explore marketplace / Start selling), and an animated-feeling collage of AI outputs with prompt cards floating over them.
Sections: For buyers (preview, buy, generate in one click); For creators (storefront, protected delivery, payouts, promo kit — "Stop selling prompts in DMs"); For developers (versioning, test sets, Prompt API with code snippet); supported AI tools strip; how it works in 3 steps; creator testimonials (clearly fictional placeholder names); pricing teaser; FAQ; final CTA; footer. Mention the mobile app with app store badges placeholders.
```

27. Creator promo kit

```
Design the Creator Promo Kit screen and its outputs (desktop + mobile).

Screen: pick a listing, choose template style, auto-generated assets preview, editable caption with hashtags, short buy link, Download all and Post via connected account.
Assets to design: Instagram reel cover (1080×1920), Instagram feed post (1080×1350), story with link sticker area (1080×1920), TikTok cover (1080×1920). Each shows before/after sample outputs, listing title, price, creator handle and a "Get the prompt" call to action, with the actual prompt text never shown.
```

28. Launch social posts

```
Design 4 Instagram launch posts (1080×1350) and 2 stories (1080×1920) announcing Prompt Engine Web: 1) "The prompt marketplace is live"; 2) "Creators: sell your prompts properly" (storefront, payouts); 3) "Buy a prompt, generate in one click"; 4) "Built for teams and developers" (versions, tests, API). Use the design system's gradient and dark theme, bold short headlines, sample AI imagery, and the app icon. Keep text under 20 words per post.
```

Follow-up prompts for iterating

Paste these into the same session after a first draft to refine it rather than starting over.

Goal	Follow-up prompt
Explore directions	Give me 3 alternative layouts for this screen: one minimal, one visual-heavy, one data-dense. Keep the design system.
Light theme	Show this screen in the light theme too, side by side with dark.
All states	Add empty, loading (skeleton), error and success states for this screen.
Mobile polish	Refine the mobile version: thumb-reachable primary actions, bottom sheets instead of modals, 44 px touch targets.
Real data	Replace placeholder content with realistic Pakistani and international creator names, prices in USD with PKR, and varied ratings.
Consistency check	Compare this screen against the earlier marketplace screens and fix any inconsistent spacing, colors or component usage.
Accessibility	Check contrast and focus states against WCAG AA and fix any failures.
Urdu / RTL	Show a version of this screen in Urdu with right-to-left layout.
Prompt protection	Make sure no purchased prompt text is visible anywhere on buyer-facing pre-purchase screens; show what is locked.
Developer handoff	Annotate this screen with spacing, component names and states for the frontend developers.
